

Ignore the LT # here
this is an IXCP 10M45S

Select the output coupling cap to match your chip amp's input impedance. That is, use the minimum size needed get the bass extension acceptable to you. Within the same product line, a smaller cap sounds better than a bigger cap. Use the best cap you can afford. Sonicaps sound good. Sonicap Platinum is Teflon and sounds great. Multicap PPFX is very good (NOT PPMFX!) V-Caps are amongst the very best. This cap will dominate the sound you get. Choose wisely!

Adjust pot for ~135V on plate
check current across 120R
resistor. Verify in range of 15-20mA

Carbon comp
or carbon film
only; place
right at G pin

Attenuator
any value up to 500k
lower value will be
quieter

Cheap Red LEDs
~1.7 volts across each

LDR attenuators are fantastic here
