Sheet: 1/1

the configuration has been tested with 30uH output inductor (er 39 4mm gap with 22turns ) the load was 4 ohms played loud for some hours and worked well ,without a heatsink.

also t 157 - 52 with 1mm gap was tested with 15turns and 40turns was tested all was o.k with circuits .  
i personally prefer and use 28 turns  
the outputs irf9540n and 540n were warm  
voltage tested was +/-31 v1ts 20amps
