

Combined front baffle and plenum mounted to the box w/ 1.25" x 1.25" cleats and screws.

Drivers mounted to the plenum from the inside of the box.

Reduced plenum volume, and resulting increase in internal box volume.

Reduced internal plenum depth and better control over plenum mouth size.

Box needs bracing on the large side and back panels, e.g.: divide port into three parts, and carry the dividers all the way around the box to brace back and sides.
