Current for long tail is 4.5mA

This CCS is to VAS, current is 8mA

This CCS feeds current to the PNP driver, and current is 30mA

Each power transistor with 1 to 1.5mA coletor to emitter current in stand by mode

Total positive current should be adjusted to 100mA

Dx Troyan

" The power plant "

Unclipped, sinusoidal power, continuous, with 80 volts supplies is: 350/650W RMS

8ohms/4ohms

Differential current is 2.25 mA to each transistor

This CCS feed current to the NPN driver, current is 30mA

Despite the schematic showing 4 output pairs, the real thing is 10 output pairs

Total negative current should be adjusted to 100mA
