

All resistors +/-1% metal film unless otherwise noted  
 C6 and C8 can be replaced with one 47uF bipolar, same applies to C7 and C9.  
 Using bipolar electrolytic capacitors reduces the capacitor distortion somewhat.

Approx. 4V across R5 and R6  
 Voltage across D6: approx. 3.7V

Voltage across D5: approx. 3.7V

Approx. 2.6V across R14

R18, R19: optional

R24', R25': alternative way of connecting resistors when signal source is known to be unbalanced
