

- NOTES:**
1. All electrolytics are 50V
  2. Not used: R21, R15, R4, U1, U3, D3, D5, C2, C4
  3. Original AX numbers used where possible. "x5" output part numbers not shown.
  4. R14 and R31 are 100K for 510na bias and 115K @ 8 ohms and 82.5K for 500na bias and 100K @ 8 ohms.
  5. Each 2SJ109J contributes one transistor to each side of the input differential.

<b>100 W Aleph-X with JFET inputs.</b>
