

I'll be using some vintage Definitive Technology speakers I bought back in '92. I hope they still work. They haven't been used in quite a while.

- (2) BP 20
- (2) BP 2
- (1) C 1

I'll run these speakers with a Yamaha RX-V773WA.

So the question is:

What subwoofer configuration will complement my room and existing sound system? I want the best bang for my buck without too much overkill.

Show me the plans, parts, and where to get them and I can build it. I'm clueless about all the technical jargon—I just want a great sounding subwoofer for both movies and music.

The space beneath the TV for subwoofer placement is: 10' wide, 13" tall and 22" deep.
