About: Dayton Audio DS215-8 8" Designer Series Woofer Speaker

How would this work as a replacement speaker in a small inexpensive 15 watt bass guitar practice amp with a cheap 8" speaker? The box is 12 x 12 by 7" deep and is sealed. I would be ok with cutting a port into it if needed. It would only be used for practice at low volume. I'm looking to get better sounding bass then I currently have.

Rich H on Feb 17, 2018

BEST ANSWER: It will work, but I don't think it fulfills "inexpensive". There are other options. I would drop in a Celestion Eight 15 - \$29, 95dB sensitivity.

If you want better bass,

Goldwood GW208/8 is quite a nice option.

Slightly cheaper than the DS215-8 is the PA200-8 and DA215-8. Both will also be fine, the DA215-8 will give good bass extension. This is all based on theory, and all for the box unmodified (I would leave it sealed). You will need to check mounting dimensions.

My choice would be the Goldwood, but for a trusted instrument amplifier speaker, and for better loudness, I would say the Celestion.

The DS215-8 will work though.

About: Peerless India W8-12T 12P 8" Paper Cone Woofer 12 Ohm

I have towers with two if these W8-12T 12P and a tweeter and two ten inch powered subs. I wanted to upgrade to higher sensitivity speakers just not sure where I'd start? Thank you

A shopper on Apr 2, 2018

BEST ANSWER: I have two Mach 3 speakers that were fantastic in their day. Over the years (22) they finally gave out. I replaced them with the 12 in speakers for Mach 1 and my speakers sound better than ever. I believe the new speakers are constructed of better materials. If these speakers are compatible with yours, you would be very happy. If they won't fit call Parts Express for their suggestions for a replacement. I think you will be very pleased. I hope this helped you. Good luck.
