## NOTICE OF DISCREPANCIES ON THE PASS A-40 AMPLIFIER PCB

The printed circuit board called PASS A-40 has been found with a trace error on the base of Q1. The following graphics depict the differences between the board as it should have been reproduced and the way in which it actually was made. By cutting ONE trace and soldering a single jumper wire, the problem can be resolved.  
Thank you.

Depicts the way the board is upon receipt

Depicts the board after corrections
