

DESCRIPTION

The ALTEC 614D Speaker Cabinet is a bass reflex enclosure for mounting a 12" loudspeaker. The cabinet is heavily constructed of $\frac{3}{4}$ " material, with sturdy bracing, and is lined with acoustic damping material. The cabinet includes an acoustic port, located behind the snap-in grille assembly, which provides excellent low-frequency loading for ALTEC bass loudspeakers. When a low-frequency loudspeaker is mounted in the cabinet, the speaker/cabinet unit may be

used in two-way sound systems that include a separate high-frequency horn/driver and dividing network if these system components are mounted externally to the 614D cabinet.

This compact bass reflex enclosure furnishes correct baffling and mounting for high-quality installations and affords optimum performance in a minimum space. The 614D Speaker Cabinet may be permanently mounted or used as a portable unit.
