

# NOTES:

1. All electrolytics are 50V
2. Not used: R21, R45, R4, V1, V3, D3, D5
3. Original AX numbers used where possible. "x5" output part numbers not shown.
4. R14 and R31 are 100K for 540ma bias and 115W @ 8 ohms and 82.5K for 590ma bias and 100W @ 8 ohms.
5. C2 and C4 are optional. Adjust the value to optimize square wave response if desired.
