What I have used in my board, recommended !

What you need if you are using more than 400 V !

Information's:

- 1) Better filter but a bit tight with 330 uF!

- 2) The STU9HN65M2 can be soldered on the top of the board, it is small enough
The FQFP2N60C must be soldered under the board, be careful with pin out!

- 3) Other compatible output tubes may be used :
 - 6V6 with **8k** (10 to 15 W) output transformer (*Hammond 1608 / 1620 / 1650E or Toroidy EL84 PP*)
 - 6L6, 6L6GC, KT66 with **6,6k** (20 to 25 W) output transformer (*Hammond 1620 / 1650FA or Toroidy EL34 PP*)
 - 6550, KT88 with **4,3k** (60 W) output transformer (*Hammond 1650N or Toroidy KT88 PP*)

- 4) Vaccum tubes suppliers :
 - Banzai music* (*Germany*) <https://www.banzaimusic.com/home.php>
 - Vintage HiFi* (*Italy*) <http://www.tubes.it/en/>
 - Tube depot (*U.S.A.*) <https://www.tubedepot.com/>
 - The tube store (*Canada*) <http://www.thetubestore.com/>
 - Antique Electronic Supply* (*U.S.A.*) https://www.tubesandmore.com/products/vacuum_tubes

* I have personally bought tubes to these suppliers without any problem!
