

2. The above values are in good agreement with the values obtained from the following equation: $\log \frac{1}{1 - \alpha} = \frac{1}{2} \log \frac{1}{1 - \alpha} + \frac{1}{2} \log \frac{1}{1 - \alpha}$. The values of α are calculated from the values of $\log \frac{1}{1 - \alpha}$ and $\log \frac{1}{1 - \alpha}$ and are in good agreement with the values of α obtained from the above equation.
