

To the RTX6001 users on the diyAudio Forum

Date: 03-sep-2019 Ref.: JNO

Dear forum users,

The RTX6001 Audio Analyzer was the first audio analyzer we as RTX brought to market, as a supplementary offering to our lineup of RF measurement equipment.

The users of this forum took valuable part in the design process by helping and inspiring Jens during the design cycles. In return RTX offered a first lot of products at a price significantly below normal sales price.

We have had the RTX6001 analyzer in the market for some time now. The sales figures have not met our expectations and going forward RTX has decided to discontinue the product and focus on other opportunities.

The RTX6001 remains an important internal tool at RTX, and we use it extensively in our development projects where we engineer the wireless audio technologies needed for tomorrows ProAudio products.

The product information will be back online shortly, in an archive of previous products that's being added to our website. Needless to say we will maintain all support- and warranty obligations towards you and other customers who invested in the RTX6001.

We always stand by our customers – and have done so ever since Jens and a group of fellow engineers founded our company 25 years ago.

Best regards,
Jesper Noer

International Sales Director
RTX A/S
