

Note: to clear the basket legs a cutout of ~101.5 mm is required. A larger base to support the bezel can be made with a cutout 95mm & added slots for the portion of the legs that extend toward the outer edge of the bezel.

EL70 extended range driver dimensions

Notes:
1/ With ~101.5mm cutout, one can get away without chamfering the back of the cutout for material <15mm (assuming a 6mm rebate), for the tighter, slotted cutout a champher would be recommended
