

After the very good results of the OpAmp SPARKOS I decided to try the regulators SPARKOS and to make a small PCB to have the regulators the closer the OpAmp.

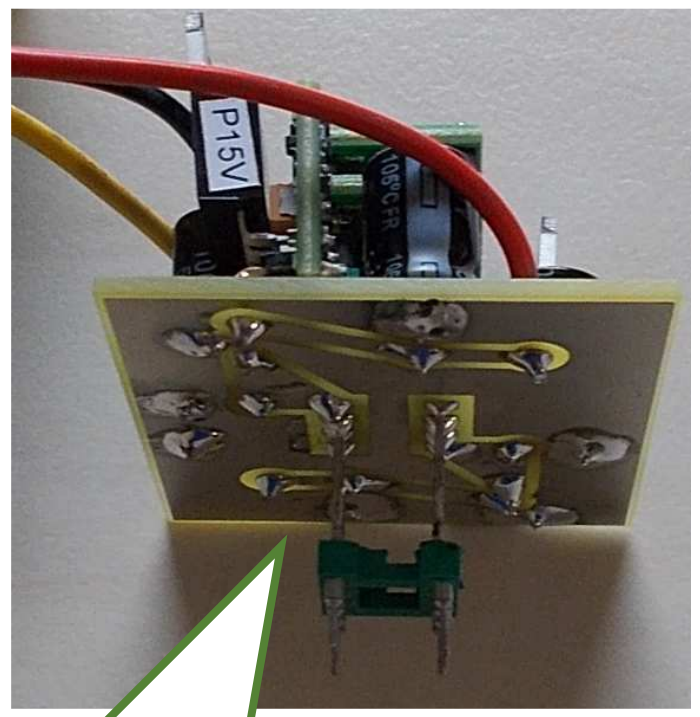

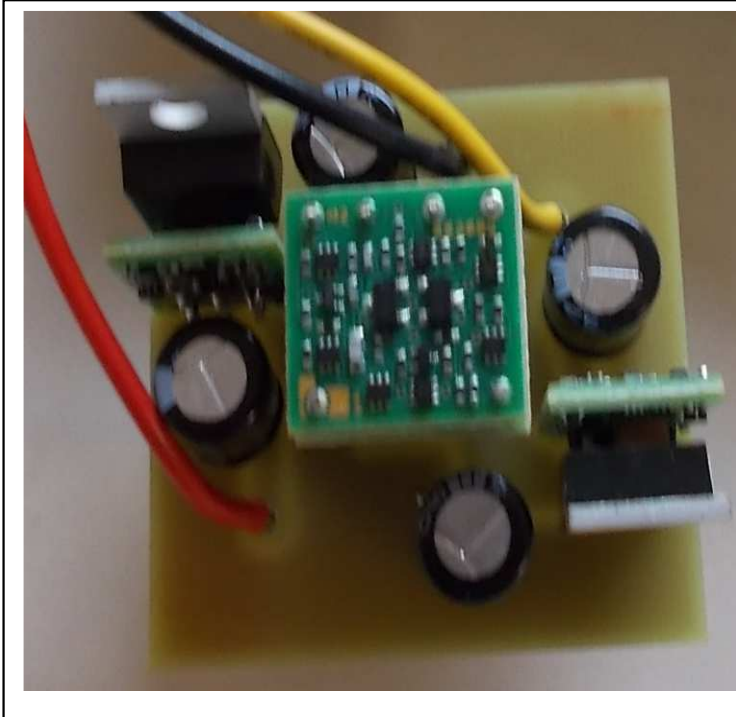

Perhaps it seems unnecessary but it's for the fun and the DIY pleasure.

The PCB is a single sided .

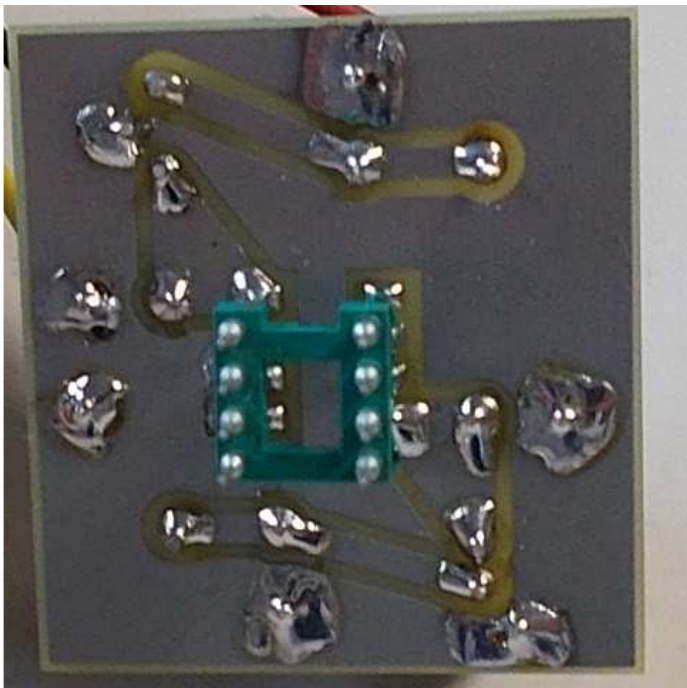

The previous assembly of regulators is still in place, I will make comparisons in the following days

You cannot see on the picture but the pin 4 and 8 are connected to the green support

**CONCLUSION :** The SPARKOS products are very good
