the configuration has been tested with 30uh output inductor (er 39 4mm gap with 22turns) the load was 4 ohms played loud for some hours and worked well ,without a heatsink.

also t 157 - 52 with 1mm gap was tested with 15turns and 40turns was tested all was o.k with circuits .
i personally prefer and use 28 turns

the outputs irf9540n and 540n were warm
voltage tested was +/-31 vlt 20amps
