

JBL 12 inch 220 6 H/J (H = 8 Ohm, J = 16 Ohm version?) System Q = 0.65 gives optimum balance of Xmax and power handling ie driver is reaches both limits at the same time and is not prematurely limited by one or the other.

Using 105dB continuous SPL (111dB peaks) as reference, the driver will extend down flat to 35Hz at max power (600 watts).
