## BLOCK DIAGRAM

5. If within turn-on tolerances, allow unit to warm up for 5 minutes.  
The voltage should then be 30 mV, tolerances  $\pm 10\text{mV}$ .  
IF NOT WITHIN TOLERANCES GO TO ADJUSTING:
6. If OK, reconnect the soldershots across R 653 and R 654.  
Adjusting:
7. Turn off, remove bias adjusting resistors RX 1 (left) and RX 2 (right) and temporary replace with variable resistors 2 Kohms to 5 Kohms, set the variable resistors to maximum resistance.
8. Turn on and read voltage across R 653 and R 654. It should be less than 10 mV. If too high, turn off unit immediately and check the output amplifier section, especially Q609-Q611-Q613-Q615-Q617 left channel or Q610-Q612-Q614-Q616-Q618 right channel.
9. If voltage is OK upon turn-on, adjust variable resistors to read approximately 12 mV on VOM. Leave unit on for 5 minutes and reset voltage to 30 mV. Note that it takes a little time for readings to stabilize.
10. Turn off and remove variable resistors and replace with fixed resistance with exactly the same measured value. Use resistors in series or parallel if necessary.
11. Recheck idling current.
12. Reinstall soldershots across R 653 and R 654.

#### ALIGNMENT INSTRUCTIONS (continued)

##### Notes:

1. Failure to re-install soldershot across R653 and R 654 will result in failure at high volume.
2. Decreasing value of RX 1 and RX 2 will cause idling current to increase.
3. Too little idling current will cause "Crossouer" distortion. Too much idling current will result in overheating.

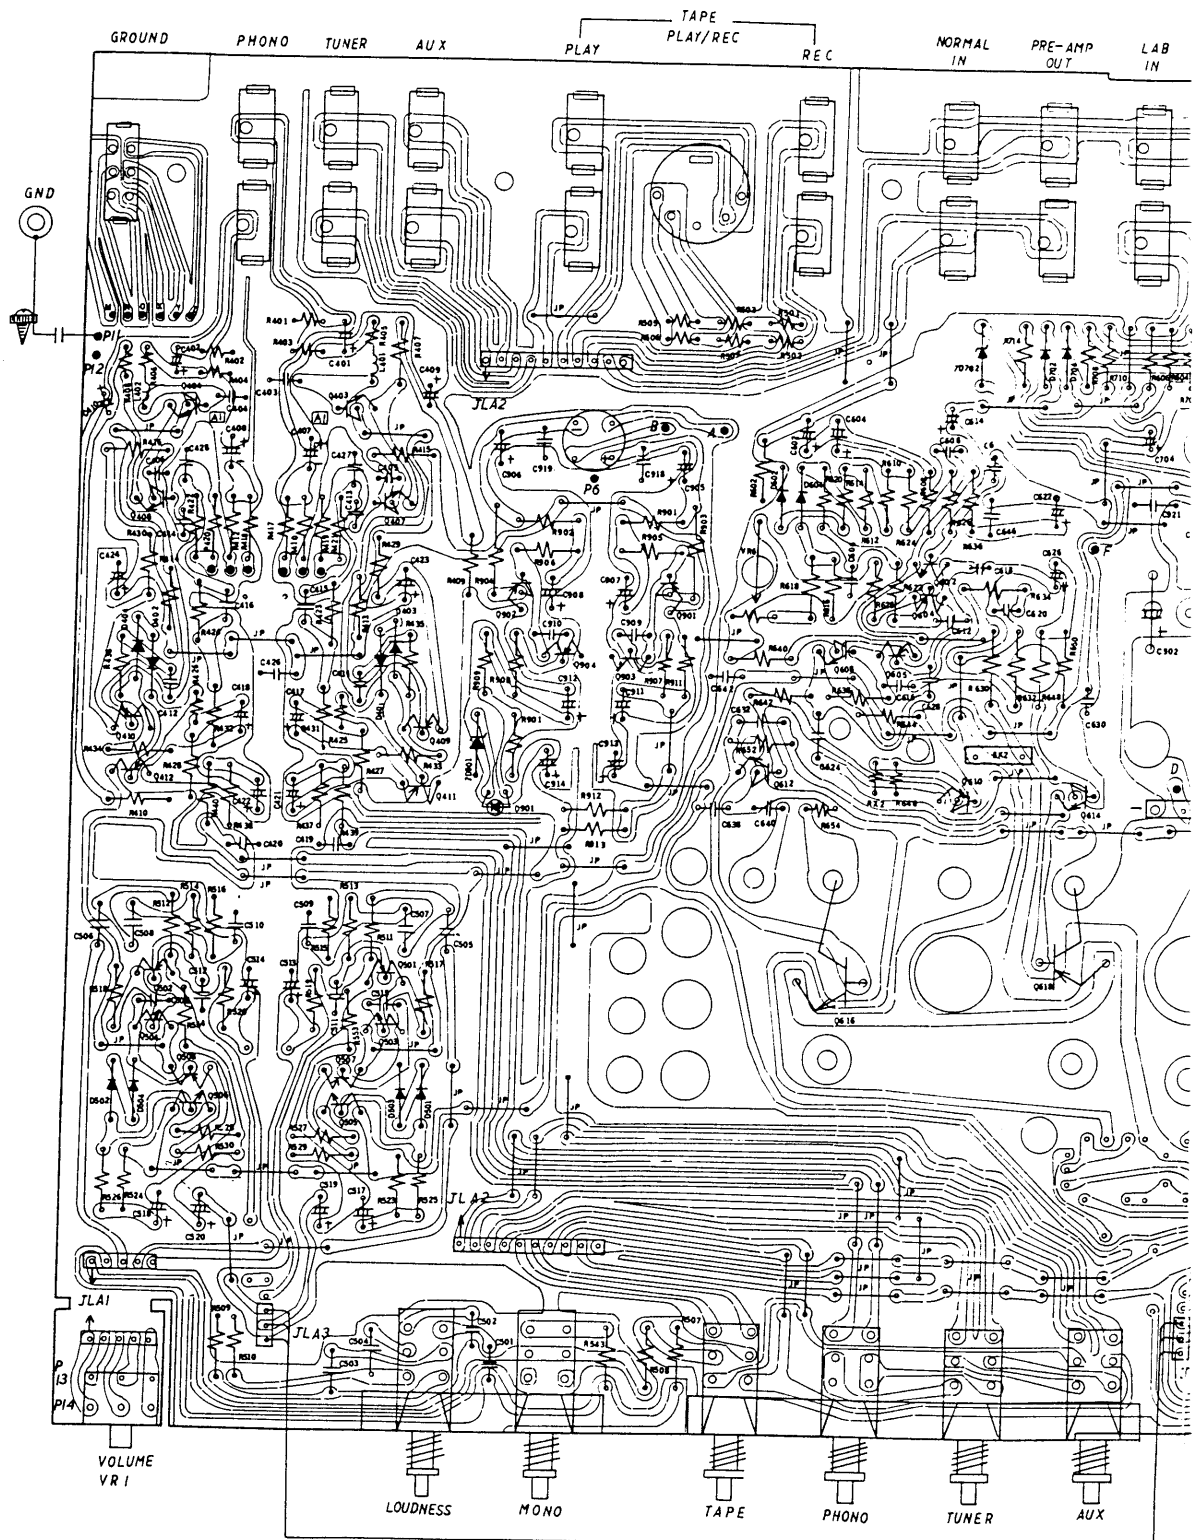

##### B DC OFFSET:

1. Set Volumecontrol to minimum, disconnect any outputloads.
2. Connect DMM or VOM across each channel's speaker terminals.
3. Turn on and read VOM. Reading should be 0 V.DC. Tolerance  $\pm 50\text{mV}$ .  
Adjust VR 5 (left) or VR 6 (right) as necessary.

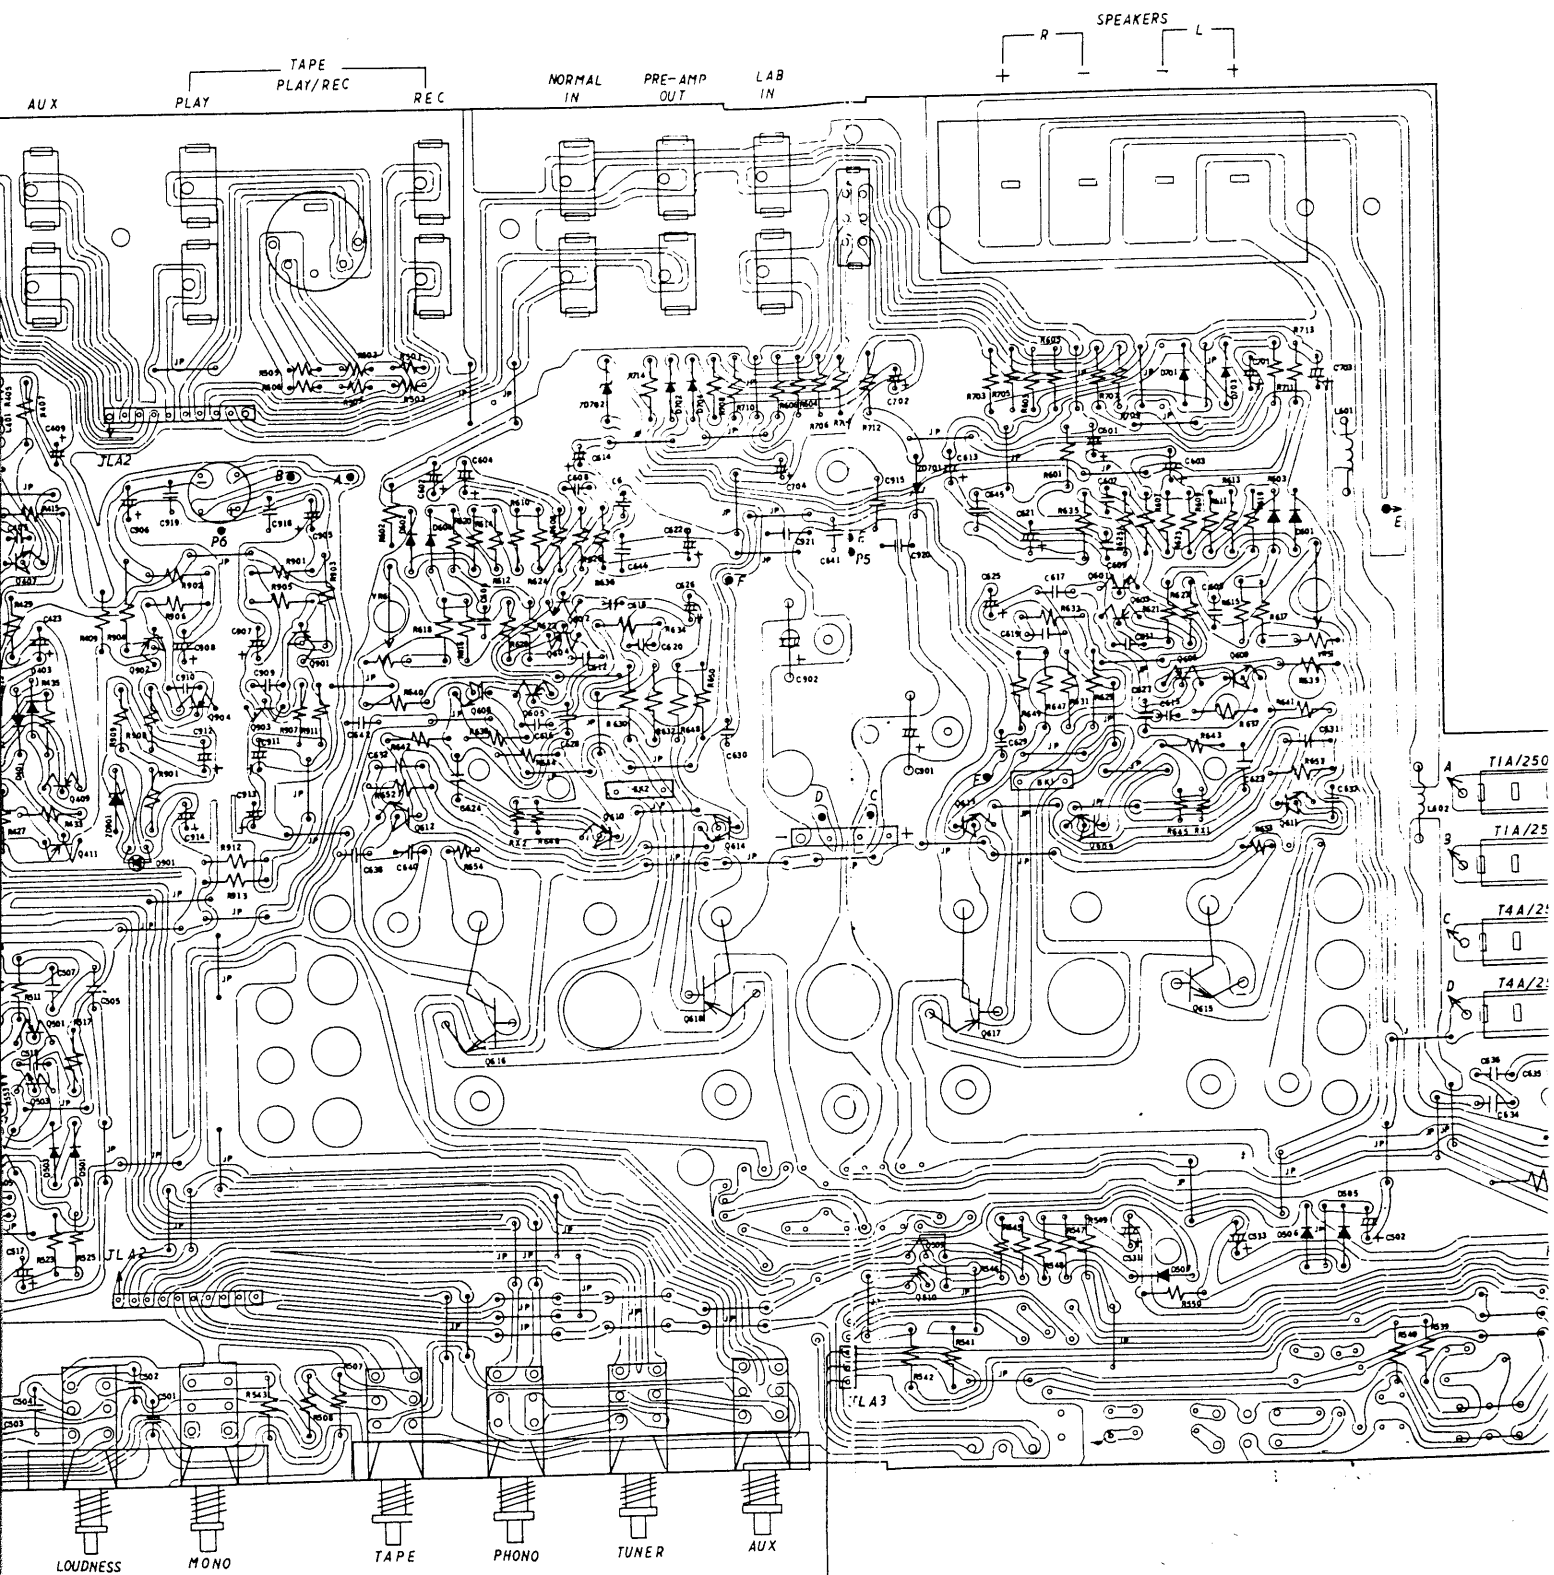

##### Notes:

1. Before adjusting VR 5 or VR 6 soften the lock paint with laquer thinner to avoid destroying them. Secure with lock paint (nail polish) when adjustment is completed.
2. Incorrect adjustment of DC offset can create pop when inserting/removing Headphone plug.
3. Offset more than 3 V is caused by defective parts, not by misadjustments.
