

Hi. Bonjour. Translated the best I can.

After years of DIY web surfing and the Overnight Sensation (Paul Camody).

I also had a Triton Kit (Jeff Bagby).

My 'Sous dominante' project is my contribution to all sharing so much DIY info online , as the Open Source REW and so much more.

Of course, the best audio quality to the dollar is the objective.

Drivers from Sbacoustics, Tweeter SB19ST-C000-4 and Woofer 6 " SB16PFC25-08.

With the chosen components in January 2019, the pair cost less than \$200 Canadian.

The resulting sound fullfill much more than expected.

Your's to give it a try.

The Bass Reflex measure $7 \frac{3}{4}$ in. arge, 13 in. hight and 10 in. deep.

The port is ABS $1 \frac{1}{2}$ by $3 \frac{1}{2}$ including $\frac{3}{4}$ in back hole.

The closed box is 9 in. deep.

In both cases a reinforment bar up by $\frac{2}{3}$ is also used to old the Crossover.

The inside volume is about 10 litre. Stuffing up to you. For me, felt and Dacron did it.
