

Precision Devices 2160 driver weighs just 12.5Kg, has legendary build quality and reliability. In a 100 litre sealed box it holds 116dB SPL/1 meter at just 50% of its 2,000 watt AES rated power and uses only 8.5mm cone travel of the 16mm Xmax.

Low weight / small cabinet is ideal for single person live sound setups and dual / multiple subs with 4 Ohm loads broadens amplifier options. Sealed design simplifies DSP crossover and Eq set up and delivers ultra low distortion / critically damped and time domain accurate studio grade bass at live sound SPL's.

At full rated power (2,000 watts continuous AES) a single driver holds 119dB SPL/1 meter and still stays well within its linear band i.e. 12.5mm Xmax.
