

PILOTONE AA-903  
Addenda Sheet

An additional Equalizer Switch position has been added to compensate for the new RIAA recording standard. Also a Phono Level Set has been incorporated to reduce the input level when a high level phono cartridge is used. Reducing the input level will prevent overload and distortion in the phono preamplifier. The Phono Level Set is located adjacent to the Phono Input jack.

In top view, fig. 2, a Hi-Lo phono level <sup>Control</sup> switch has been added between fig. A & C. This switch is referred to as fig. G in this sheet.

II. In Article 1. under the title "Features of the AA-903 Pilotone Amplifier," one additional position has been added, to equalizer to compensate for RIAA curve.

IV. Under operation of controls add:

- A. Phono Level
- B. Hum Balance

VI. Under specifications

- 1. Add Sensitivity Phono (low) 10
- Phono (high) 45

VII. Under phono Equalizer add:

RIAA position
