This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

#### WARNING

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health & Safety Code, Section 25249.5).

When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

## 1. SAFETY INFORMATION

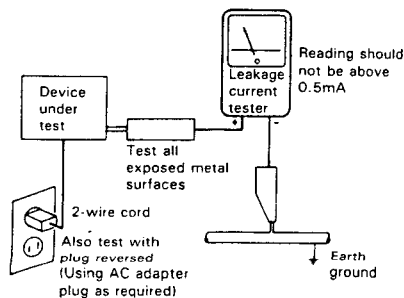

(FOR USA MODEL ONLY)

### 1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

#### LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

### 2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a  $\Delta$  on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

### 3. EXPLODED VIEWS, PACKING AND PARTS LIST

#### NOTES:

- Parts without part number cannot be supplied.
- The  $\Delta$  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "⊙" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

LINE VOLTAGE SELECTION  
(For A-777/HE, HB, HEWZ and A-878/HEZ types.)

Line voltage can be changed with the following steps.

- 1. Disconnect the AC Power cord.
- 2. Remove the top cover.
- 3. Change the position of the fuses as follows.

Voltage	Fuse Position
230V	FU3 and 4
240V	FU1 and 2

- 4. Stick the line voltage label on the rear panel.

Part No.	Description
AAX-193	220V label
AAX-192	240V label

## 6. PCB's PARTS LIST

### NOTES:

- Parts without part number cannot be supplied.
- Parts marked by "⊙" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
- The  $\Delta$  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560 $\Omega$	56 $\times 10^1$	561.....	RD1/4PS $\square$ $\square$ $\square$ J
47k $\Omega$	47 $\times 10^3$	473.....	RD1/4PS $\square$ $\square$ $\square$ J
0.5 $\Omega$	0R5.....		RN2H $\square$ $\square$ $\square$ K
1 $\Omega$	010.....		RS1P $\square$ $\square$ $\square$ K

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k $\Omega$	562 $\times 10^1$	5621.....	RN1/4SR $\square$ $\square$ $\square$ $\square$ F

## 7. FOR A-777/HE, HB, SD, HEWZ AND A-878/HEZ TYPES

## NOTES:

- Parts without part number cannot be supplied.
- The Δ mark found on some component parts indicates the importance of the supply factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "⊙" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

## CONTRAST OF MISCELLANEOUS PARTS

The A-777/HE, HB, SD, HEWZ and A-878/HEZ types are the same as the A-51/KU type with the exception of the following sections

**SPEAKER SWITCH assembly (A-878/HEZ type)**

The SPEAKER SWITCH assembly (A-878/HEZ type) is the same as the SPEAKER SWITCH assembly (A-51/KU type) for service supply parts.

## 8. PANEL FACILITIES

• Illustration shows model A-51.

### ① POWER switch/indicator

Press to turn power to the unit ON and OFF.  
When the power is ON, the indicator lights.

### ② PHONES jack

When using headphones, insert the plug into this jack.

### ③ SPEAKERS selector switch

Use this switch to listen to the speaker systems connected to SPEAKERS terminals.

#### OFF:

Released position: No sound is heard from the speaker systems. Set to this position when listening with headphones.

#### A:

For reproduction of sound with the speaker system connected to the SPEAKERS A terminals.

#### B:

For reproduction of sound with the speaker system connected to the SPEAKERS B terminals.

#### A + B:

For reproduction of sound with the speaker systems connected to SPEAKERS A and B terminals.

### ④ BASS tone control

Use to adjust the low-frequency tone at low volume level. The center position is the flat (normal) position. When turned to the right, low-frequency tones are emphasized; when turned to the left, low-frequency tones are de-emphasized.

#### NOTE:

- This function does not operate when the DIRECT button is in the ON position.
- At volume levels lower than "32," the set tone control effect is obtained.
- At volume levels higher than "32," the effect becomes increasingly weaker.

### ⑤ TREBLE tone control

Use to adjust the high-frequency tone at low volume level. The center position is the flat (normal) position. When turned to the right, high-frequency tones are emphasized; when turned to the left, high-frequency tones are de-emphasized.

#### NOTE:

- This function does not operate when the DIRECT button is in the ON position.
- At volume levels lower than "32," the set tone control effect is obtained.
- At volume levels higher than "32," the effect becomes increasingly weaker.

### ⑥ BALANCE control

Should normally be left in the center position. Adjust balance if the sound is louder from one of the speakers. If the right side is louder, turn toward the LEFT position and if the left side is louder, turn toward the RIGHT position.

#### NOTE:

This function does not operate when the DIRECT button is in the ON position.

### ⑦ PHONO EQ button/indicator

When not using a phono input, turn the phono equalizer power circuit off in order to prevent it from collecting noise during playback of other sources.

#### ON:

The indicator lights: Always set to this position when using a phono input. Immediately after turning ON, audio signal will be muted for several seconds until circuit operation becomes stable.

#### OFF:

The indicator goes off: Set to this position when not using a phono input.

### ⑧ LOUDNESS button/indicator

Use when listening at low volume levels.

#### ON:

The indicator lights: Boosts low and high frequencies to give added punch to playback at low volume.

#### OFF:

The indicator goes off: Should normally be left in this position.

#### NOTE:

This button does not operate when the DIRECT button is in the ON position.

### ⑨ ADPT 1/TAPE 3 button/indicator

Use this button to listen to tape playback, or to monitor a tape recording.

#### ON:

The indicator lights: Press when listening to the playback sound of the cassette deck or the adaptor connected to the ADPT 1/TAPE 3 IN/PLAY jacks, or to monitor the sound being recorded on the cassette deck connected to the ADPT 1/TAPE 3 OUT/REC jacks.

#### OFF:

The indicator goes off: Normally leave the button in this position.

#### NOTE:

When the DIRECT button is set to ON, this function does not operate and no signal is output at the ADPT 1/TAPE 3 OUT/REC jacks.

### ⑩ DIRECT button/indicator

Use this button when you wish to bypass the various frequency adjusting circuits and adaptor jacks (ADPT 1/TAPE 3, ADPT 2, BASS, TREBLE, BALANCE, LOUDNESS).

#### ON:

When this button is in this position, the indicator lights and the signals input from the input jacks are reproduced without passing through the various frequency-adjusting circuits. This results in flat, pure sound which is a more faithful reproduction of the input source.

#### OFF:

When the button is in this position the indicator goes out and the signal passes through the various frequency adjusting circuits.

### ⑪ PHONO SELECTOR switch

Set in accordance with the type of cartridge used in your turntable.

#### MM:

Set to this position when using a moving magnet cartridge, or a MC (moving coil) cartridge with high output of 1 mV or more.

#### MC:

Set to this position when using a moving coil cartridge.

#### MM SUBSONIC/MC SUBSONIC:

Subsonic filter for moving coil or moving magnet cartridges to cut ultralow frequency noise less than 17 Hz generated when playing a warped record.

When using a high-output moving coil cartridge, set this switch to MM or MM SUBSONIC.

### ⑫ VOLUME CONTROL

Use to adjust volume level.

#### NOTE:

This unit is equipped with a circuit that attenuates the effect of tone and loudness controls as volume is turned up.

### ⑬ MUTING button/indicator

Use to temporarily cut sound volume.

#### ON:

The indicator lights. The sound volume will be cut off.

#### OFF:

The indicator goes off. The sound will return to its previous volume.

### ⑭ INPUT SELECTOR switch

Use to select playback source.

#### LINE:

Set to this position when listening to the programs from a component connected to the LINE jacks.

#### TUNER:

Set to this position when listening to AM or FM broadcasts with a tuner.

#### PHONO:

Set to this position when listening to record playback on a turntable.

#### CD:

Set to this position when listening to a compact disc playback with a CD player.

#### DAT/TAPE 1:

For playback with a cassette deck or digital audio tape deck connected to the DAT/TAPE 1 jacks.

#### TAPE 2:

For playback with a cassette deck connected to the TAPE 2 jacks.

### ⑮ REC SELECTOR switch

Switch to select recording signal. When set at other positions than SOURCE or OFF, signals can be recorded during playback of the equipment selected by INPUT SELECTOR switch.

#### TUNER:

To record from a TUNER.

#### CD:

To record from a CD player.

#### OFF:

In this position nothing from the REC jacks of DAT/TAPE 1 and TAPE 2 will be output. Select it when not recording; output to cassette decks will be disconnected, improving sound quality.

#### SOURCE:

To record the equipment selected by INPUT SELECTOR switch.

#### TAPE:

##### 1 ► 2

To record (copy) from the cassette deck of DAT/TAPE 1 jacks, over to the cassette deck of TAPE 2 jacks.

##### 2 ► 1

To record (copy) from the cassette deck of TAPE 2 jacks, over to the cassette deck of DAT/TAPE 1 jacks.

#### NOTE:

The REC SELECTOR switch has no effect on the recording output of the ADPT 1/TAPE 3 jacks.

## 9. ADJUSTMENTS

### ■ IDLE CURRENT ADJUSTMENT

1. Set the VOLUME CONTROL to minimum.
2. Set the POWER switch to ON.
3. Adjust VR101 (VR102) so that the voltage between OP and BB (AA) becomes  $11 \pm \frac{1}{10}$  mV.

**NOTE :**

After tuning on the power, wait at least 30 minutes before adjustment.
