RemoteDial

1. Discription

The RemoteDial is an infrared remote control with rotary encoder input and learning capabilities.

Highlights:

- Compact size at 65 x 40.6mm
- Few components
- Easy mounting via rotary encoder shaft
- Learning capabilities
- Wide choice of encoders (Alps, Elma, ...)
- 6 Remote functions (dial right, dial left, short press, long press, pressed dial left, pressed dial right)
- Powered by CR2032 button cell, or 2xAA or AAA
- Quiescent current consumption: 3-9µA !!!
- 30 months battery lifetime (with CR2032)
- Good range

2. Operation

On power up, the remote will check if infrared data are stored. If not, default parameters are loaded.

This process is signalled by LED2 blinking.

LED2 then lights up continuously. The UART interface is now active for 10 seconds to allow special parameter adjustments (see Chapter 2.). If no entry is made at the UART interface within this time, the microcontroller is switched to power saving mode, and LED2 is switched off. With every user input via the rotary encoder, the microcontroller wakes up, the LED2 is switched on, corresponding infrared signals are sent and the microcontroller goes back to sleep.

3. Battery life

The battery life depends mostly on how often remote signals are sent when the current consumption increases by a factor of >200. The specified battery life refers to the sleep mode only using CR2032. Extended lifetime can be had by using 2x AA or AAA batteries in series.

* Bei Drehung wacht der Controller erst bei der zweiten Rastung auf

4. Teach mode

With the encoder button pressed, switch on power. LED2 flashes 3 times. The button can then be released. The master remote is positioned in front of the RemoteDial and the functions are taught sequentially as listed below. Successful learning is indicated by a one-off LED2 flashing. Only when all commands are learned will the parameters be permanently stored in the flash of the microcontroller. This is acknowledged by 4-time blinking of LED2. Cancellation is possible at any time by pressing the button again and is confirmed by the LED2 flashing 5 times.

RemoteDial

Teach order:

1. encoder anticlockwise *
2. encoder clockwise *
3. pressed encoder anticlockwise *
4. pressed encoder clockwise *
5. short press
6. long press

* refers to Alps Encoder (see parts list). Direction may be different for other encoder types

In teach mode, the IR receiver is powered continuously and the controller is in standard mode. Power consumption is thus high. It is recommended to either complete the teach mode, or to abort.

5. Hardware Versions

PCBv2 changes:

- Jumper (J0) to disconnect the battery
- Diode (D1) as polarity reverse protection
- Change Pull Up Resistors R8,9 SMD types

6. Assembly plan / assembly

PCB v1

PCB v2

RemoteDial

- Deposit extra solder on the minus battery pad to ensure proper contact. The clip housing should not be touching the PCB.
- Some components are optional and not used (see parts list).
- No reverse power protection is included. Make sure that the polarity is correct.
- Note that the long lead of the IR transmitter is the cathode and the shorter lead the Anode, the latter marked as + on the PCB.

- Two 1M resistors has to be included (only PCB v1 !) to pull up of the encoder data lines in the power saving mode.

6.1 Wiring diagram

RemoteDial

As an alternative to the CR2032 battery, 2 AAA batteries in series, e.g., can be used. No voltage regulator is provided, so the supply voltage must be between 2 - 3.6V.

The status LED2 is optional and must be connected with a series resistor.

The Power jumper J0 (PCB v2) and the boot jumper on J1 (as shown) must be set.

RemoteDial

9. UART Interface

The configuration is via a UART TTL Interface. This interface is active for 10 seconds after Power ON. A commercial USB Serial-TTL adaptor is required for the configuration. A converter with FTDI chip is recommended.

The following interface parameters must be set at the PC side :

9600Baud / 8 Data Bit / 1 Stop Bit / Parity None

After switching on the control, the controller sends the following data in ASCII format.

```
Remote Dial v0.0 20200130 MkD<\n>
Control with protocol STX + CMD + LEN + VALUEx + VALUEy + ETX<\n>
Debug Out Enable: STX + 'A' + '5' + '1' + ETX<\n>
Debug Out Disable: STX + 'A' + '5' + '1' + ETX<\n>
Set Default: STX + 'B' + '5' + '1' + ETX<\n>
Set Volume Repeat Value ('0'..'5'): STX + 'C' + '5' + 'value' + ETX<\n>
<\n>
<\n>
Have fun :)))))))))) <\n>
```

9.1 Connection

Here with an example FTDI USB-Serial adapter. In principle, every adapter is compatible with 3.3V TTL levels. TxD and RxD are crossed.

RemoteDial

9.2 Protocol Structure

Start STX, Command (CMD), Protocol length (LEN), Value 1. character (VALUE)...Value last character (VALUE_n), Stop ETX

STX	CMD	LEN	VALUE1	...	VALUE _n	ETX
-----	-----	-----	--------	-----	--------------------	-----

Example (volume repetition = 3):

0x02	0x43	0x35	0x33	0x03
STX	(char = ,C')	(char = ,5')	(char = ,3')	ETX

The command (CMD) can be found in the following table, it corresponds to the characters 'A' - 'Z'.

LEN corresponds to the length of the sent data in bytes (incl. STX / ETX).

The characters can have the value '0' - '9'.

A value 10 therefore consists of two characters with the value 0x31 ('1') and 0x30 ('0').

9.3 Command Table

CMD	LEN	Value	Discription
0x41 (,A')	,5'	,0'	Debug-Output disable
0x41 (,A')	,5'	,1'	Debug-Output enable
0x42 (,B')	,5'	,1'	Set default parameter
0x43 (,C')	,5'	,0'...'5'	Volume repetition

RemoteDial

9.4 RemoteDialConfig

RemoteDialConfig is a simple and easy Config App for the RemoteDial.

RemoteDialConfig run on every Windows 10 PC with .NET Framework 4.8 installed.

1. Start RemoteDialConfig
2. Set COM Port from USB-Serial adapter (see Windows Device Manager)
3. Click Connect Button
4. Power off the RemoteDial, Push Rotary encoder switch to deload the capacitors
5. Power on
6. The interface is active for 10 seconds after Power ON (after receive data, the timer starts again)
7. After switching on the control, the controller sends the following information data
8. Click Command Button to transmit data

RemoteDialConfig application window showing connection settings, commands, and data exchange.

Connection: Connect, Disconnect, Port: COM8

Commands: Debug Out Enable, Set Default, Volume Rep: 0, Debug Out Disable

Send Data: [STX]A51[ETX] (Clear button)

Received Data:

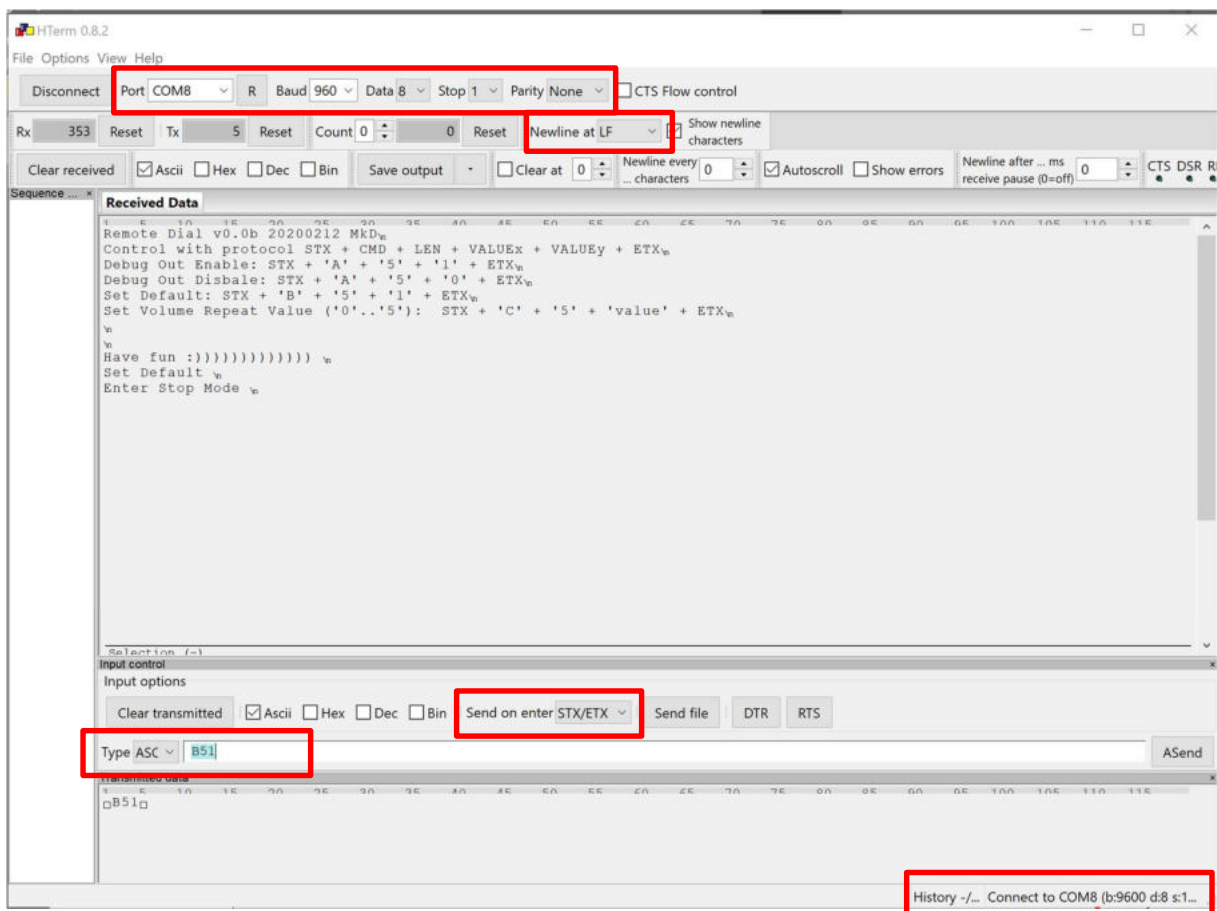

```
Remote Dial v0.0b 20200212 MkD[LF]
Control with protocol STX + CMD + LEN + VALUEx + VALUEy + ETX[LF]
Debug Out Enable: STX + 'A' + '5' + '1' + ETX[LF]
Debug Out Disable: STX + 'A' + '5' + '0' + ETX[LF]
Set Default: STX + 'B' + '5' + '1' + ETX[LF]
Set Volume Repeat Value ('0'..'5'): STX + 'C' + '5' + 'value' + ETX[LF]
[LF]
[LF]
Have fun :))))))) [LF]
Debug Out Enable [LF]
Enc value: 32768[LF]
Enc delta: 11111
```

20200212_MkD

RemoteDial

9.5 Example with HTerm

1. Start HTerm (<http://www.der-hammer.info/pages/terminal.html>)
2. Set COM Port from USB-Serial adapter (see Windows Device Manager)
3. Set Interface parameter („Baud“, „Data“, „Stop“, „Parity“), and „Send on enter“ and „Type“
4. Click Connect Button
5. Power off the RemoteDial, Push Rotary encoder Switch to deload the capacitors
6. Power on
7. The interface is active for 10 seconds after Power ON (after receive data, the timer starts again)
8. After switching on the control, the controller sends the following information data
9. Send command from command table (example: STX B51 ETX to set default parameter)

RemoteDial

10. Compatibility

10.1 Supported Remote Codes

Protocol	Manufacturer	Comment
RC5	Grundig, Marantz, Phillips	
RC6	Grundig, Marantz, Phillips	
NEC16/42	NEC, Yamaha, Canon, Tevion, Harman/Kardon, Hitachi, JVC, Pioneer, Toshiba, Orion, viele other japaniese manufacturer	
Apple	Apple	
Sony SIRCS	Sony	
Kaseikyo	Technics, Panasonic, Denon	

10.2 Proven Equipment

Devices that have already been tested are listed below, sorted by compatible or incompatible. This list is constantly being expanded.

10.2.1 Compatible Devices

Manufacturer	Model	Comment
Akustik Perfekt	Concerto CD1	CD-Player
Apple TV (3. Generation)	A1469	Set Top Box
Elgato	eyeTV hybrid	USB TV Card
Elgato	eyeTV	USB TV Card
Harman Kardon	AVR507	AV Receiver
Harman/Kardon	HK 630	Vollverstärker
NAD	C658	Streaming PreAmp, Set Volume Repeat = 2
Panasonic	TH-42PZ700E	TV
Phillips	49PUS7181/12	TV
SXONO		Phono Pre
Telefunken	L55F243R3C	TV
XLINE PRE		Pre Amp

RemoteDial

10.2.2 Incompatible Devices

Manufacturer	Model	Comment
Entertain/Magenta TV	MR401	Set Top Box
Entertain/Magenta TV	MR201	Set Top Box
