

*Plate 2* Microphotograph (optical) of stereo record groove identical to that in Plate 1 after *one* playing at only 2.7 gm tracking-weight, but with a pick-up with a tip mass of 3 mgm. (See pp. 12 and 31.)

*Plate 3 (opposite)* Same condition of groove and pick-up as in Plate 2 under the *electron* microscope shows that stylus path (top wavy path) does not follow the cutter. The two indents (bottom) show the damage that is seen depicted repetitively in Plate 2. (See pp. 31 and 34.)
