

Power supply board for Victor's oscillators using Hammond 1598EBK case and 40mm deep Box Enclosures B3-080 case internally for AC shielding V2.0

Floating high voltage regulator can use either the LM317HV or TL783.
317HV needs 5mA min load
783 needs 10mA min load
use either panel mount OR heatsink, but not both

R14 = jumper to rvreg, or
can install R10 to use as
current source
