# ALIGNMENT

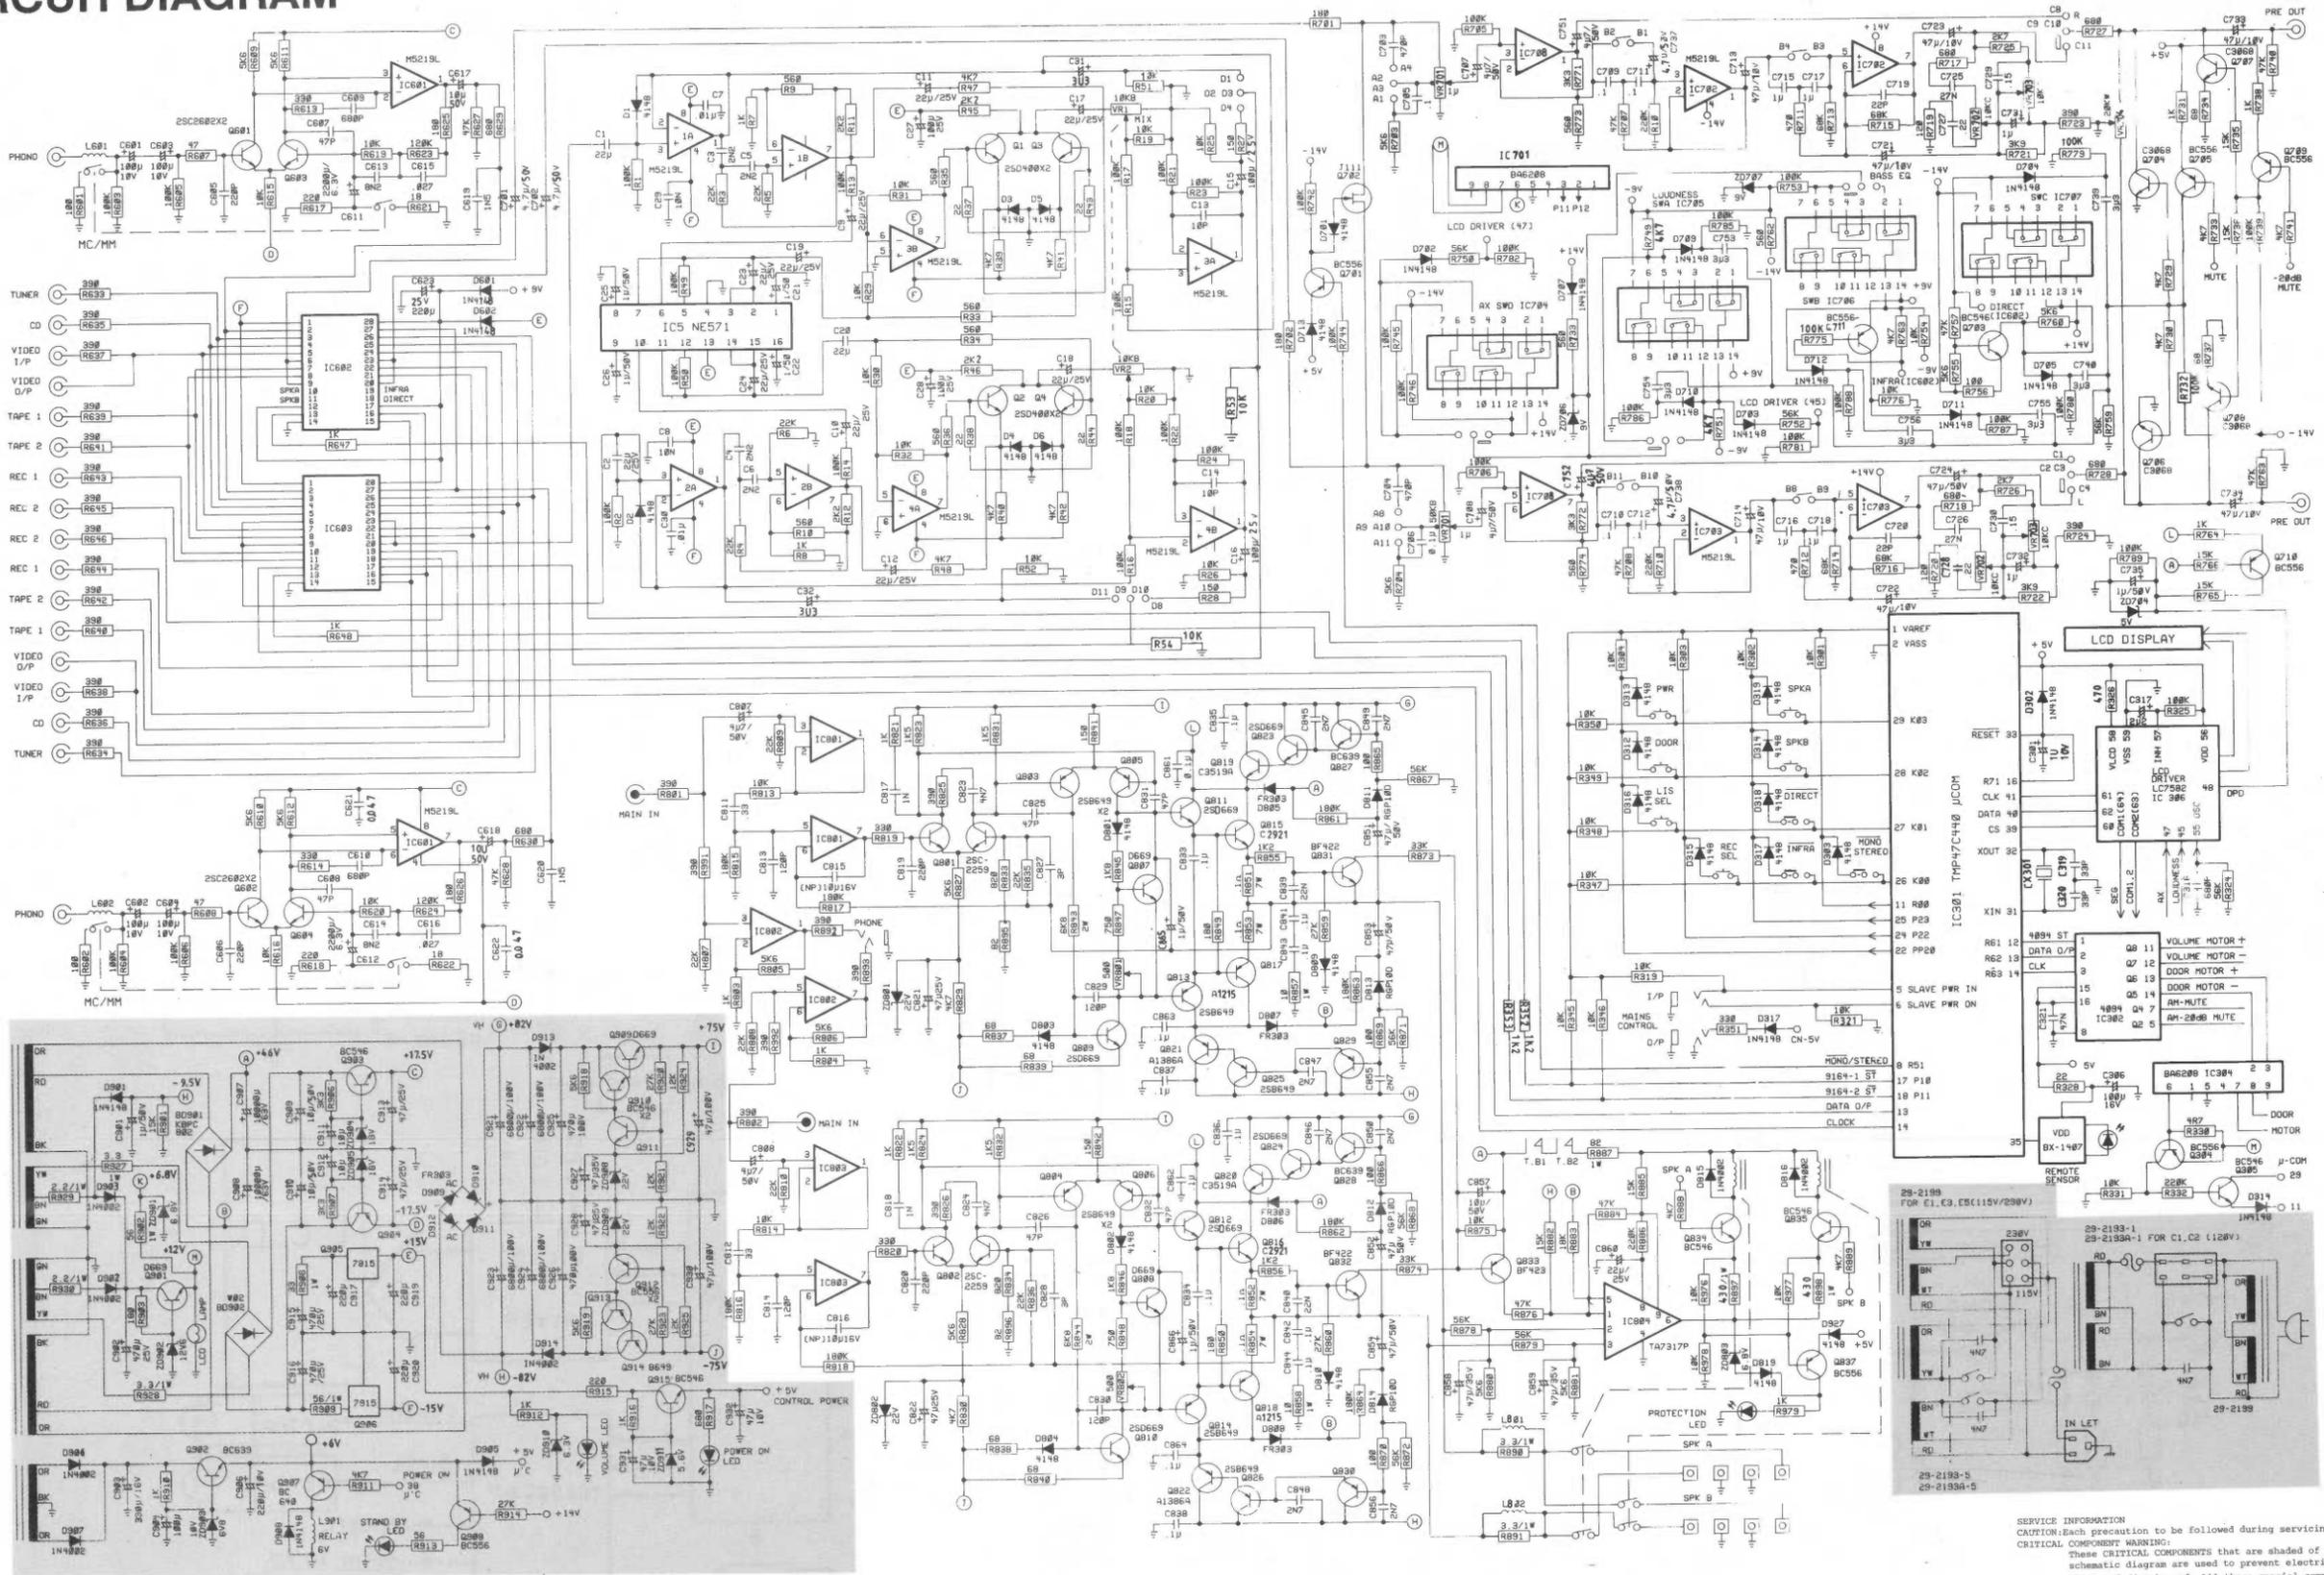

## **IDLE CURRENT ALIGNMENT**

1. Set the volume control at minimum position.
2. Remove the load from speaker terminals.
3. Push on power for 5 minutes pre-heating.
4. Connect DC millivolt-meter across R851 (0.1 ohm) for left channel and R852 (0.1 ohm) for right channel. The meter sensitivity should be set at 100mV full scale deflection.
5. If the reading from the meter is between 2.5mV and 5.0mV the alignment is completed.
6. If the reading were less than 2.5mV or more than 5.0mV. Should be alignment the value of VR801 (left channel) VR802 (right channel) till the reading is between 2.5mV and 5.0mV.

**SERVICE INFORMATION**  
 CAUTION: Each precaution to be followed during servicing.  
**CRITICAL COMPONENT WARNING:**  
 These CRITICAL COMPONENTS that are shaded of the schematic diagram are used to prevent electric shock and fire hazard. All these special components must be replaced only with the same type identical to these in the schematic diagram.  
 Make leakage current measurement before returning the appliance to the customer. See measurement circuit as shown below.
