

Veleric sim by Bjørn Johannesen

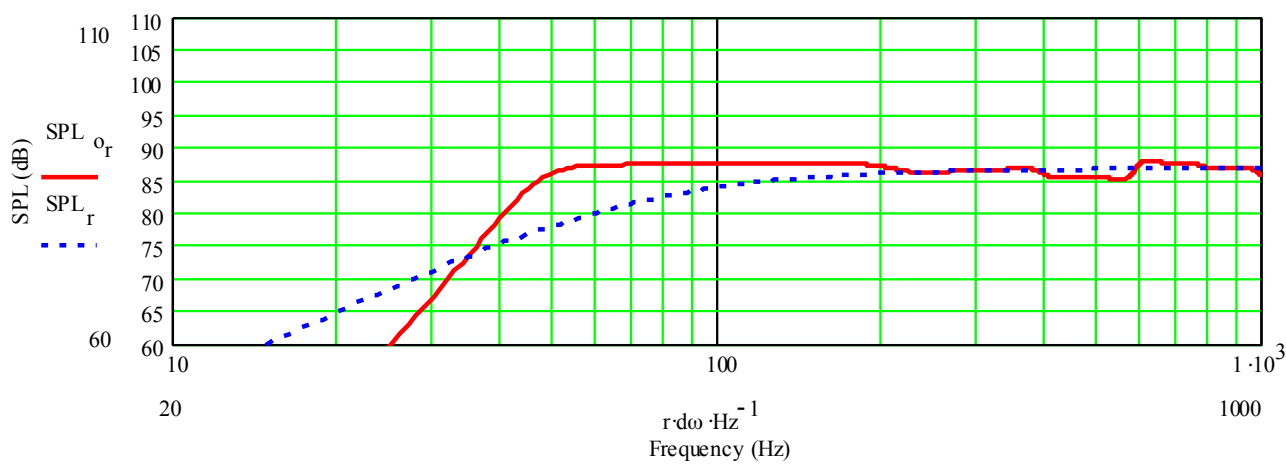

The shape is like TABAQ, the port is an extension to the last part of the line.

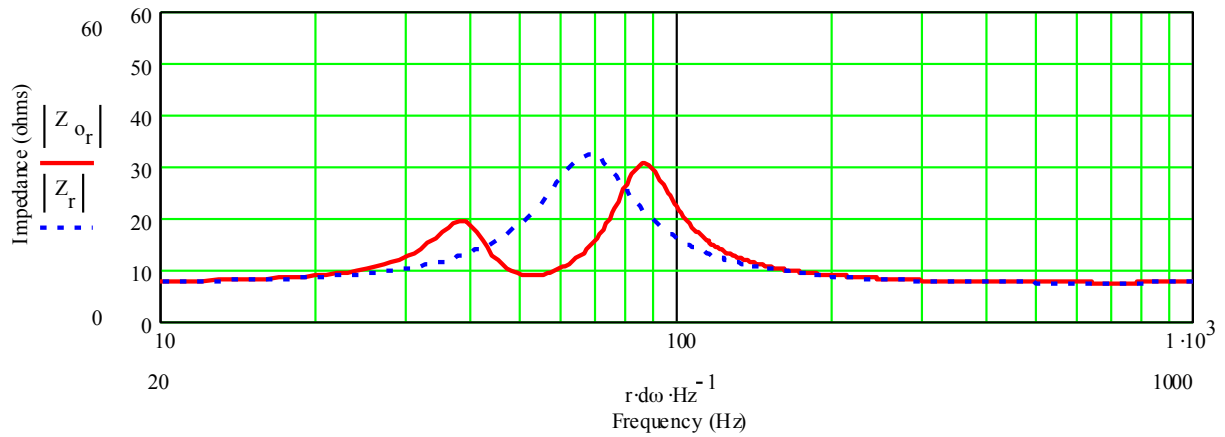

Tuning is just above 50 Hz

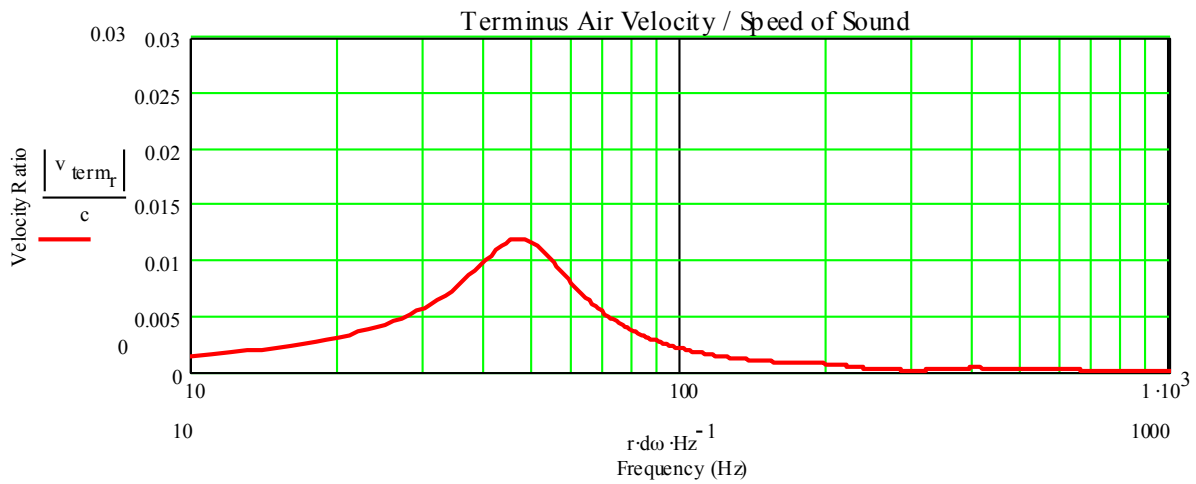

Nice SPL – output down to 40 Hz

Impedance, note the lower peak is damped. Controlling the cone movement below tuning

Air movement of air in the port should not cause problems

Stuffing 65 gram in upper 2/3.
Driver one third from the closed end.
