

Valley People Mic Pre

The small numbers near the transistor pins correspond to the pin numbers on the array base that is shown on a Valley People document.

Note: The operational amplifiers may be NE 5532 or NE 5534 in lieu of the TL072 shown, thus allowing the circuit to drive 600 ohm balanced lines.

- * You might have to adjust this cap value to suppress oscillation. 100 pf might be better than 10 pf.
If you make a change to this cap, replace the cap that goes from pin 3 of the opamp to ground with the same value.
