Schematic Dynaco ST-70 with VTA driver board - power supply and one channel shown voltages shown are + or - 10 %

Bob01605@aol.com

This is the schematic for the power supply and circuit for the LEFT channel of the VTA ST-70 which uses ODD numbered resistors and capacitors. The right channel is mirror of the left channel but uses EVEN numbered resistors and capacitors. This schematic shows the use of the CE Distribution 80, 40, 30, 20 quad cap in place of the stock Dynaco quad cap which was a 30 (right off pin 8 of the rectifier), 20, 20, 20 quad cap.
